Dharmik Harkhani

(617)-372-3310 | dharmik.harkhani@outlook.com | linkedin.com/in/dharmik-harkhani

Software Engineer with over 4 years of experience in full-stack development, microservices and cloud infrastructures (AWS). Skilled in Java, JavaScript, SQL and NoSQL databases. Detail-oriented and well-versed in software development principles, with a strong track record of delivering high-quality solutions

PROFESSIONAL EXPERIENCE

Full Stack Software Engineer, *Leroy Pharmacy*, New York, USA — Mar 2024 – Current

- Developed and deployed real-time scalable Messaging feature using WebSocket, React, and RabbitMQ, featuring read receipts, and responsive design reducing consultation response time by 28% and enhancing patient engagement
- Developed high-integrity inventory update feature in Spring Boot application, implementing a two-phase reconciliation workflow to validate product scans against EPCIS standardized data, reducing data discrepancies by 35%.
- Architected secure authentication and HIPAA-compliant role-based access control with JWT & Spring Security, mitigating all unauthorized access attempts for Patient portal
- Designed responsive components in React for inventory management, prescription management, and customer service, which reduced redundant code by 21%
- Delivered 10+ technical enhancements using Spring MVC (used Spring IOC, Dependency Injection) for customer service and Prescription Management project
- Elevated the testing infrastructure by writing highly testable code with Junit, Mockito and React Testing Library, achieving 75% unit-test coverage and cutting production defects by 26%

Software Engineer, *Appian*, McLean, USA — Jul 2022 – Jan 2023

- Implemented new features like Expression Highlighting, Custom Interfaces, Smart Reminder for Appian Low-code App using Spring, Redux, Kafka, and Junit that allows users to design new pages faster, cutting interface creation time by 30%
- Built Kafka Stream consumers to propagate user changes to a SQL database, ensuring real-time synchronization between low-code interface definitions and backend storage
- Collaborated with senior engineers and QA to test and refine new UI components across multiple browsers and environments, ensuring stability and cross-platform compatibility

Software Engineer, Co-op, *Fidelity Investments*, Boston, USA — Jul 2021 – Dec 2021

- Developed POCs to demonstrate REST api integration with Aerospike and various services to manage Aerospike data, reducing server load time by 30%
- Led a knowledge-sharing session on a newly implemented Snowflake stored procedure that cut simulation data retrieval time from ~3 minutes to under 1 minute

Web Developer, *BeeOnline Communications*, Mumbai, India — Sep 2018 – Dec 2019

- Designed and developed web apps for the financial services industry to manage company reporting using PHP & Angular

VOLUNTEER EXPERIENCE

Software Engineer Intern, *Changing the present*, New York, USA — Mar 2023 – June 2023

- Leveraged Sequelize ORM Framework to use MySQL for data storage for Express to manage 50+ organizations' data

SKILLS

- **Languages & Framework:** Java, Spring Boot, JavaScript, React, NodeJS, Python, CodeIgniter
- **Frontend & web:** JavaScript, TypeScript, Redux, HTML5, CSS, Webpack, NPM,
- **Backend Technologies:** Microservices, Kafka, Hibernate/JPA, SQL, NoSQL, Maven, NGINX
- **Cloud Technologies:** AWS (EC2, S3, RDS, CloudWatch, Lambda), Terraform, Packer, GitHub Actions

EDUCATION

Master of Science in Computer Software Engineering — Jan 2020 – May 2022

Northeastern University - Boston, MA | GPA: 3.67

PROJECTS

Notes App – Personal Project *(Claude Code, WebSocket, SpringBoot, PostgreSQL)* — Sep 2025 – Current

- Developed full-stack application with Spring Boot, React, and WebSocket collaboration server, allowing multiple users to work on a same note together in real-time
- Accelerated development velocity by 40% using Claude Code for leveraging conversational code generation and iterative refinement to implement complex features (vector similarity search, real-time collaboration)
- Architected hybrid search system combining keyword matching and vector similarity using OpenAI text-embedding-3-small model with weighted ranking algorithm improving search accuracy by 3x compared to keyword-only approach
